

EVENT REGISTRATION SYSTEM

Design and implement an “Event registration” system for our company. It will be used by event management admin to register an employee with an event, so that employees can get notifications regarding their favorite events. An employee may be interested in zero or more events. Also, an event may have multiple subscribers (interested employees).

Table Structure: DO NOT CHANGE THE STRUCTURE OF THE TABLES

Table: EMPLOYEES

MID	NAME	JOIN_DATE	EMAIL_ID
M100100	Karthik Kumar	2013-02-05	karthik_kumar
M100108	Ramesh Kulkarni	2013-02-05	ramesh_kulkarni
M100189	Rohit Agarwal M	2013-03-22	rohit_agarwal_m
M101190	Magesh Narayanan	2013-03-22	magesh_narayanan

Table: EVENTS

EVENT_ID	EVENT_TITLE	DESCRIPTION
1	Trekking	Held every month. More details from Manish Kumar.
2	Guitar Classes	Weekly 3 sessions. Classes conducted by Daniel M
3	Yoga Classes	Saturdays and Sundays. Classes conducted by Yamini
4	Health & Diet tips	Every Friday 5 PM to 6 PM by Dr.Kishore Dutta

NOTE:

- Create entity classes and proper association between entities for the requirement.

- Develop Menu driven application to implement following feature using Hibernate framework:
 - Register employee for events
 - Display all employees
